Morphological and enzymatic changes induced by chronic demyelination in the corpus callosum and frontal white matter of rat brain. Corpus callosum and frontal white matter from

normal and 3-month chronic experimental allergic encephalomyelitis (EAE) were studied by light and electron microscopy and compared to controls. Changes consisted of a loss of oligodendrocytes, myelin sheath breakdown, macrophage infiltration, and axonal degeneration. Enzyme activity studies showed a reduction in Na⁺ K⁺ ATPase and cholinesterase in the myelin sheath. Furthermore, a decrease of 2',3'-cyclic nucleotide phosphodiesterase was detected in both corpus callosum and frontal white matter. These findings suggest that the loss of axons observed in chronic EAE could be mediated by an impaired function of macrophages during demyelination. The results also demonstrate that axons and myelin sheaths are still under the influence of other basic nerve functions.

Q: Why does my function only show 1 output when it has 2 possible outcomes? I am creating a program that finds the average of the numbers entered by the user, but when it gets to the last section it only shows me 1 result when it should show the 2 possible results for both the average and the minimum and the maximum. Can anyone help me understand why this is happening and how I can fix it? Here is my code:

```
private int getInput(Scanner scan) { int userInput = scan.nextInt();
return userInput; } public int getAverage(int num) { int min =
Integer.MAX_VALUE; int max = Integer.MIN_VALUE; for (int i = ca3bfb1094
```

Go to the menu File>Open or just double click in the folder you copied the file to. The software will open and scan the folder. If the software says there are no supported files, create a new folder, select the left side panel and click on new. Navigate to where you copied the file to and open. Note Some of the files need to be unzipped in order to use the keygen. Use a program like winrar and unzip the files.
