Siemens Connex 6.4 Download 13 40

[13] The aim of this study was to establish an interactive [1] [1] software for the pre-fitting assessment of hearing impairment [2] [2] in the open hearing-loss population. It consists of two stand-alone [3] [3] applications: Software for the pre-fitting assessment of hearing impairment and [4] [4] Software for the electronic auditory diagnostics, both of which can be [5] [5] integrated into medical-apparatus software applications. [6] [6] The aim of this study was to establish an interactive software for the pre-fitting [7] [7] assessment of hearing impairment in the open hearing-loss population. [8] [8] The Interactive Pre-Fitting Assessment Software consists of two stand-alone [9] [9] applications: Software for the pre-fitting assessment of hearing [10] [10] impairment (Experimental Software) and software for the electronic [11] [11] auditory diagnostics (Patient software). The Experimental Software can be [12] [12] integrated into medical-apparatus software applications and is available as an [13] [13] stand-alone software application. The Patient software is designed for [14] [14] use in the clinical laboratory. [15] [15] Introduction [16] [16] For some years, telecoil systems have been of particular interest within the [17] [17] hearing-impaired population because they are regarded as a promising new [18] [18] method for access to hearing services. [19] [19] The international standard (ISO 8691-1) defines hardware and software for a [20] [20] telecoil system. However, if the hearing-loss population is to be provided [21] [21] with this system, it is necessary for the design of the software to be [22] [22] appropriate to the characteristics of the hearing-loss population. The aim [23] [23] of this study was to establish an interactive software for the pre-fitting [24] [24] assessment of hearing impairment in the open hearing-loss population. [25] [25] The pre- 6d1f23a050
