Field of the Invention The present invention relates to an apparatus for locating an object in an image. 2. Description of the Related Art It is known that a location of an object in an image can be obtained by processing an image of the object. An image processing apparatus for detecting a motion vector of an object in a moving image includes an input device that receives a moving image and outputs moving image data. The image processing apparatus extracts a motion vector from moving image data of an inputted moving image based on a detection criterion, such as a sum of absolute values of correlation between neighboring pixels (e.g., see Patent Document 1). from a peer of c6a93da74d
